Chicago, Illinois 60604

Dear Michael:

This letter concerns recent changes in the subject project work. Per recent telephone discussions with Steve Dunn the following comments are appropriate.

1. The winter should be used to complete as much "paper-work" activities as possible so that field activities may resume as soon as possible.
2. If possible the QAPP should be submitted in segments allowing staged review by IEPA staff.
3. Interviews with knowledgeable persons should begin as soon as possible so that information can be incorporated into the "Description of Current Situation". However, I feel that information will continue to be forthcoming throughout the course of the project and that an exhaustive effort at this time (prior to preliminary report) would be counterproductive. Keri Luly will be cooperating with your staff in this effort.
4. Your suggestion that soil gas monitoring may be more effective for determining plume limits rather than the original scoped purpose of well siting is appropriate.

The scheduling changes proposed in your December 24, 1985 letter are acceptable. Also, minor cost changes to date for SURDEX and TECHNOS do not represent major departures from the contract. This letter serves as approval of these changes. The contract will be amended at a time of major change if appropriate.

Page 2

I trust this letter serves to clear up some loose ends in the project and documents IEPA's approval of the minor changes to date. If you have any questions, please contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Jeff Larson".
